Understanding UML Diagrams

- Classes represented as boxes labeled with their member variables with types and cardinalities.
- Arrows with cardinality indicate associations between classes.
- A hollow diamond at the origin of an arrow represents shared aggregation (i.e., object is referenced and not owned).
- A solid diamond at the origin of an arrow represents composite aggregation (i.e., child object is owned by its parent object).
- Hollow arrows are used to represent inheritance.

Identified (Base Class for All SBOL Objects)

- *identity* - globally unique URI to identify this object (required).
- *persistentIdentity* - identity shared by multiple versions of the same object (optional).
- *displayId* - human-readable id composed of alphanumeric and underscore characters (optional).
- *version* - uses semantic versioning to identify multiple versions of the same object (optional).

Identified (Base Class for All SBOL Objects)

- *wasDerivedFrom* - identity of object that this is derived from (optional).
- *name* - human-readable String of arbitrary characters (optional).
- *description* - thorough text description of the object (optional).
- *annotations* - additional data about this object (more later).

Identified (Example)

```
<?xml version="1.0" ?>
<rdf:RDF xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#"
  xmlns:dcterms="http://purl.org/dc/terms/"
  xmlns:prov="http://www.w3.org/ns/prov#"
  xmlns:sbol="http://sbols.org/v2#">
  <sbol:ComponentDefinition rdf:about="http://www.partsregistry.org/BBa_J23119/2">
    <sbol:persistentIdentity rdf:resource="http://www.partsregistry.org/BBa_J23119"/>
    <sbol:displayId> BBa_J23119 </sbol:displayId>
    <sbol:version> 2 </sbol:version>
    <prov:wasDerivedFrom rdf:resource="http://www.partsregistry.org/BBa_J23119/1"/>
    <dcterms:title> J23119 promoter </dcterms:title>
    <dcterms:description> Constitutive promoter </dcterms:description>
  </sbol:ComponentDefinition>
</rdf:RDF>
```

Compliant Top-Level URIs

$\langle \text{URI prefix} \rangle / \langle \text{displayId} \rangle / \langle \text{version} \rangle$

- 1 The *identity* MUST begin with a *URI prefix* that maps to a domain over which the user has control.
- 2 The *persistentIdentity* and *displayId* properties are REQUIRED.
- 3 The *persistentIdentity* MUST end with a delimiter ('/', '#', or ':') followed by the *displayId* of the object.
- 4 If an object is not given a *version*, then its *identity* and *persistentIdentity* properties MUST contain the same *URI*.
- 5 If an object has a *version*, then its *identity* property MUST contain a *URI* of the form $\langle \text{persistentIdentity} \rangle / \langle \text{version} \rangle$.

Compliant Child URIs

$\langle \textit{parent persistentIdentity} \rangle / \langle \textit{displayId} \rangle / \langle \textit{parent version} \rangle$

- 1 The *persistentIdentity* MUST begin with the *persistentIdentity* of its parent object and be immediately followed by a delimiter ('/', '#', or ':') and the *displayId* of the object.
- 2 The *version* MUST contain the same *String* as the *version* property of the object's parent object.

TopLevel

Collection

Collection (Example)

```
<?xml version="1.0" ?>
<rdf:RDF xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#"

Component (Child of ComponentDefinition)

Access URI

<http://sbols.org/v2#public>
<http://sbols.org/v2#private>

Description

MAY be referred to by remote **MapsTo** objects.
MUST NOT be referred to by remote **MapsTo** objects.

MapsTo (Child of ComponentInstance)

Refinement URI

<http://sbols.org/v2#useRemote>

<http://sbols.org/v2#useLocal>

<http://sbols.org/v2#verifyIdentical>

<http://sbols.org/v2#merge>

Description

All references MUST dereference to the *remote* CI.

All references MUST dereference to the *local* CI.

The *definition* of the *local* and *remote* MUST be same **CD**.

All references MUST dereference to both objects.

MapsTo (Example)

SequenceAnnotation (Child of ComponentDefinition)

Location (Child of SequenceAnnotation)

Orientation URI

<http://sbols.org/v2#inline>

<http://sbols.org/v2#reverseComplement>

Description

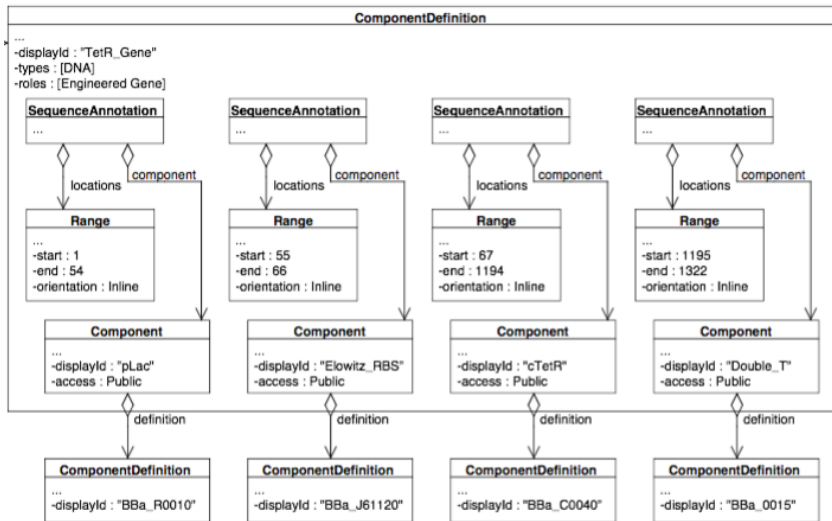

The region is inline with the sequence.

The region is on the reverse-complement translation.

SequenceConstraint (Child of ComponentDefinition)

Restriction URI

<http://sbols.org/v2#precedes>

<http://sbols.org/v2#sameOrientationAs>

<http://sbols.org/v2#oppositeOrientationAs>

Description

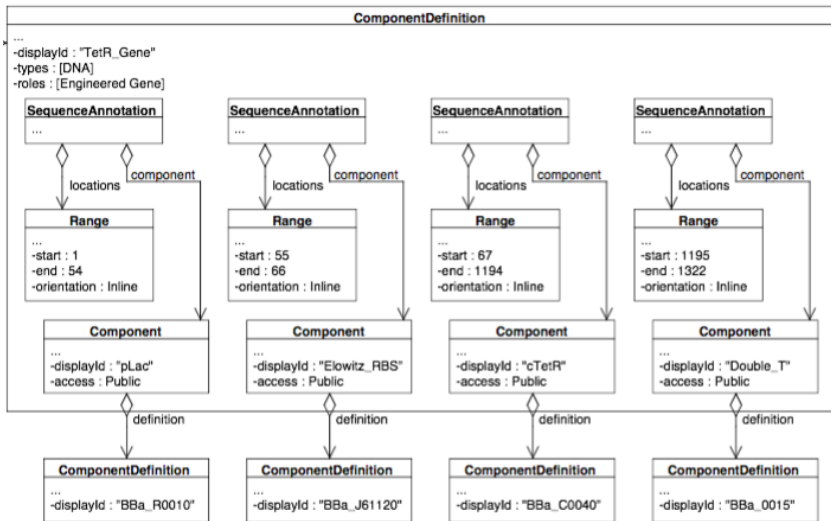

subject MUST precede *object* **Component**.

subject & *object* MUST have same orientation.

subject & *object* MUST have opposite orientations.

SequenceConstraint (Question)

QUESTION: Redrew the UML diagram below using SequenceConstraints rather than SequenceAnnotations.

Model

- *source* - URI reference to the source file for the model.
- *language* - URI that specifies language in which the model is implemented.

Model Language	URI for EDAM Term
-----------------------	--------------------------

Conclusion (SBOL Compliant Software)

- Can either support all classes or only its structural subset.
- Can support import of SBOL, export of SBOL, or both (lossy/lossless).
- SBOL Test Suite is currently under development here:
<https://github.com/SynBioDex/SBOLTestSuite>
- Validate SBOL files generated using the SBOL Validator found here:
<http://www.async.ece.utah.edu/sbol-validator/>
- Report SBOL-compliant software to the SBOL editors
(editors@sbolstandard.org), so it can be listed on the SBOL website.
